

Algorithms of Scientific Computing II

0. Introduction

Hans-Joachim Bungartz

Algorithmen des Wissenschaftlichen Rechnens II

- Elective topic in Theoretische Informatik / Mathematik / ...
- WS 2010/2011:
 - Lecture: Mi 10:15-11:45 (MI 02.07.023)
 - Tutorial: Mo 16:00-18:00, every second week (MI 02.07.023)
 - Exam date will be discussed on the lecture
- People:
 - Hans-Joachim Bungartz, Room 02.05.054
 - Daniel Butnaru, Room 02.05.036
 - Wolfgang Eckhardt, Room 02.05.055

Motivation

- Algorithms of Scientific Computing I:
 - Presentation of a selection of important modern methods in scientific computing
 - Fourier Transform
 - Space Filling Curves
 - Hierarchical Bases and Sparse Grids
- Algorithms of Scientific Computing II:
 - Not a continuation of ASC I topics, but rather introducing further examples and giving deeper insight in
 - Molecular Dynamics Simulation
 - Sparse Grids
 - Algebraic Multigrid Methods
 - Note: ASC II exists in two variants
 1. Sparse Matrices (Prof. Th. Huckle)
 2. Scientific Computing (Prof. Th. Huckle)
 3. This semester's program (see above)

Outline of the Lecture

- **Chapter 1: Molecular Dynamics Simulation**

- 1.1 Introduction
- 1.2 Examples
- 1.3 Essentials from Continuum Mechanics
- 1.4 Molecular Dynamics – the Physical Model
- 1.5 Molecular Dynamics – the Mathematical Model
- 1.6 MD – Approximations and Discretization
- 1.7 MD – Implementational Aspects
- 1.8 MD – Parallelisation
- 1.9 Molecular Dynamics – Examples of Nanofluidic Simulations
- 1.10 Numerical Methods for Long-Range Potentials

- **Chapter 2: Sparse Grids**

- 2.1 Hierarchical Basis and Sparse Grids
- 2.2 Optimization via Discretization
- 2.3 Recurrences and Complexity
- 2.4 Numerical Quadrature on Sparse Grids

Outline of the Lecture (2)

- **Chapter 3: Algebraic Multigrid Methods**
 - 3.1 Multigrid Principle
 - 3.2 Algebraic Multigrids

Bibliography I
